

Waxing with oil

For your convenience we included in your supplies box a container of coconut oil in addition to the paraffin wax pieces.

We understand it might not be convenient to heat up stones in a classroom setting so feel free to use the oil to achieve the waxing effect momentarily.

You can distribute one q-tip to each child. Let them dip it into the container of oil and rub all over their animal shape. The effect on the stone might fade away overtime.

At home the students can heat their sculptures with hairdryer and use one piece of the paraffin wax according to the video/ written instructions for a longer lasting result.
